EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Howard Bernstein on Monday July 17, 2006.

The application has been amended as follows:

As to independent **Claim 16**, on line 11, delete "and" such that the limitation reads "...connecting said first electrode with said first power source..."

As to independent **Claim 16**, on line 13, delete "one of" such that the limitation reads "...connecting said second electrode with said..."

As to independent **Claim 16**, on line 14, delete "first electrode", and insert in its place -- second electrode--, such that the limitation reads "...connecting said second electrode with a..."

2. The following is an examiner's statement of reasons for allowance:

As to independent **Claims 1,4,6 and 14**, none of the prior art made of record teaches or suggests an amplifier having a voltage follower configuration; at least one capacitor connected to the amplifier, the at least one capacitor and amplifier generating a first voltage level included in a first group of the voltage levels; and a switch circuit controlled at a predetermined timing to

switch the at least one capacitor to generate a second voltage level included in the second group of voltage levels with a discharge voltage of the at least one capacitor and a peak voltage level, as presently claimed.

As to independent **Claim 16**, none of the prior art made of record teaches or suggests a power supply circuit for driving a display, comprising a first power source terminal; a second power source terminal; a plurality of resistors connected in series between the first and second power source terminals; a first amplifier having its input coupled to a connecting point of adjacent resistors among the resistors and its output coupled to a first intermediate voltage output terminal outputting a first intermediate voltage level; a first capacitor having a first electrode and a second electrode; a first switch electrically connecting the first electrode with the output of the first amplifier in a first mode and connecting the first electrode with the first power source terminal in a second mode; and a second switch electrically connecting the second electrode with the second power source terminal in the first mode and connecting the second electrode with a second intermediate voltage output terminal outputting a second intermediate voltage level in the second mode.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
